

CORK[®]
CORE
thermal insulation
driven by nature
JORDAO

Green Innovation

Cork is a 100% natural and renewable raw material with origin in cork oak forests, a natural ecosystem with an outstanding environmental value that yearly retains more than 14 million tons of CO₂.

Recognized for its unique natural properties, which no technology has yet managed to meet, cork has been used in a wide range of applications in construction, wine, aerospace and fashion industries or household items. Cork is one of the most characteristic natural products of Portugal.

Aiming to reduce commercial refrigeration's carbon footprint, JORDAO introduces the all-new CORK CORE® thermal insulation solution. Totally eco-friendly, the innovative cork agglomerate insulation replaces the injected polyurethane (PU) with significant environmental advantages, keeping up the best performance.

How to make your business more sustainable?

Please contact us to discuss your specific requirements and learn more about our thermal insulation solution driven by nature.

Bring nature to your new store!

Cork thermal insulation is available for all JORDAO models.

JORDAO
**INNOV
COOL**

JORDAO INNOVCOOL® is JORDAO's new brand that explores the limits of ideation and creativity to think about the selling point of the future. Using state-of-the-art technology, we have developed display and conservation technology solutions that contribute to the innovation of customer experience and of selling operation.

How will it be the Future? Challenge us!
