LIGHTING COLOUR AND BRIGHTNESS CONTROL SYSTEM

App

Lighting brightness control.

Lighting colour temperature control.

Preset buttons for product categories.

Button to memorising settings.

Key benefits

System available for lighting any type of display (example: display cases, semi-verticals, murals, islands...)

Precise control of colour and brightness, allowing the lighting to be adjusted appropriately to the food range, for more attractive products and always the right colour.

No need for a technician to change the bulbs.

Intuitive mobile app, easy to set up and use.

Preset buttons with lighting parameters adjusted to the main food groups.

Integrated Wi-Fi connectivity, through an independent "Access Point" connection or through an existing network.

Very low power consumption.
